5. Delete Existing Post

1. What Are Posts in WordPress?

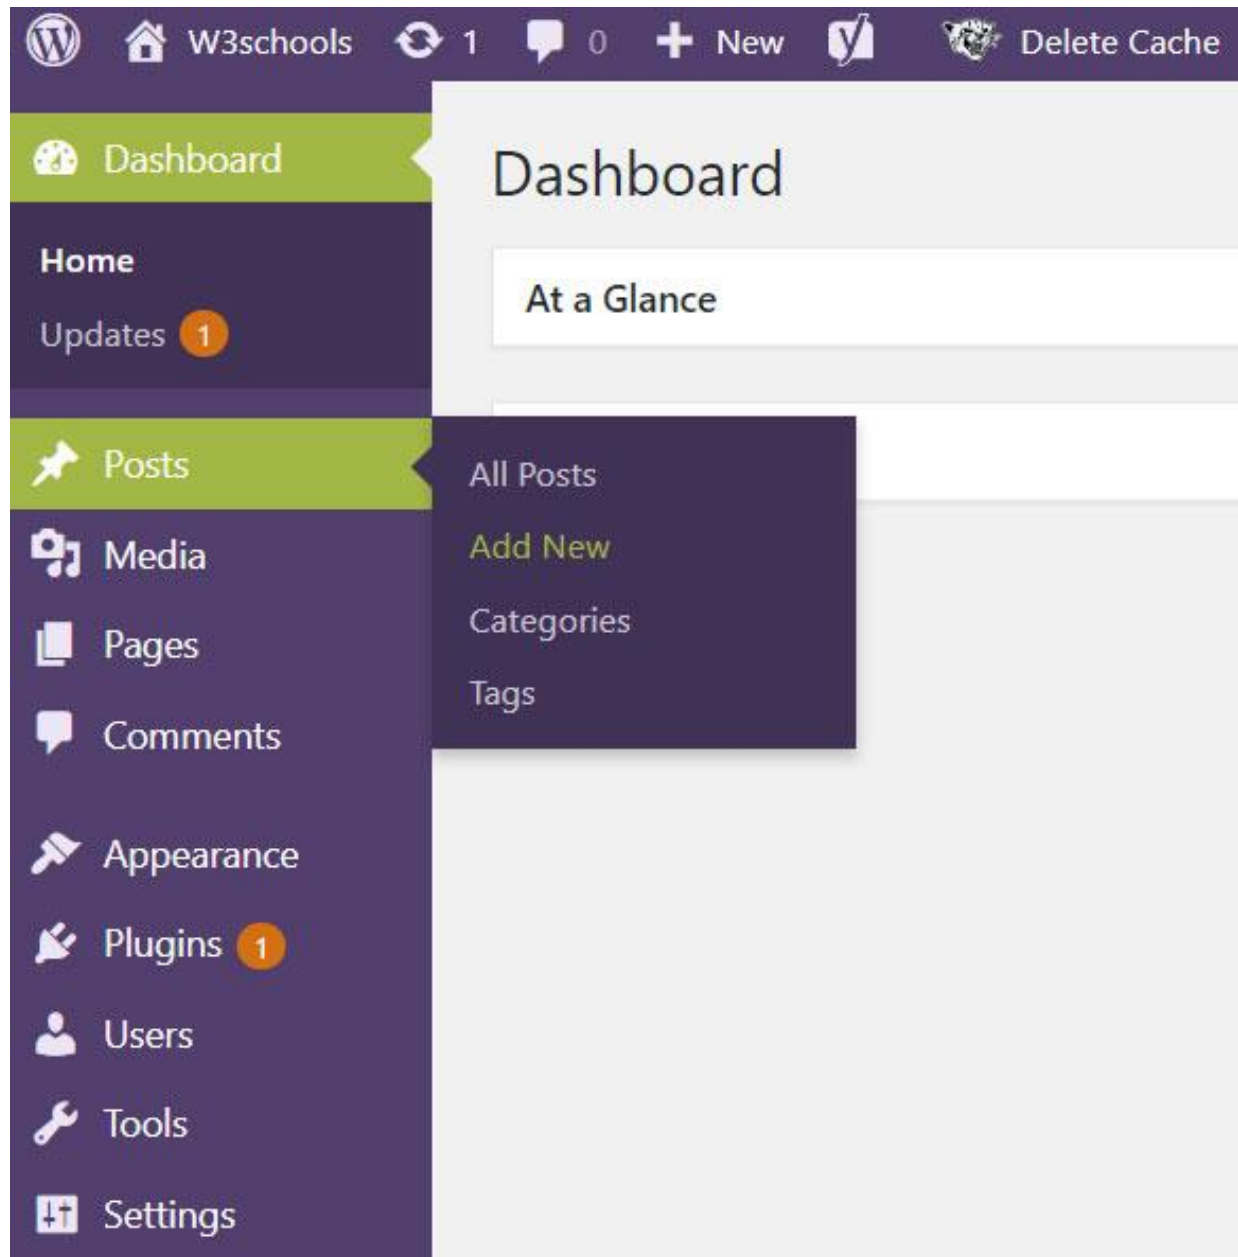

"Posts" is a WordPress component that allows users to write a blog and publish it on their associated site. These posts are listed in descending order (newest first) on the front page of the website or blog, making it easy for visitors to find the most recent content.

Posts are also commonly referred to as blog posts, articles, or blogs. They are the primary way to deliver time-sensitive content to your audience. All posts appear in your site's RSS feed and can be organized by categories and tags.

2. How to Add a New Post in WordPress?

Follow these steps to add a new post to your WordPress website:

- 1 Log in** — Sign in to your WordPress admin account.
- 2 Open Admin Sidebar** — Locate the Admin Sidebar Menu on the left side of the dashboard.
- 3 Navigate to Posts** — Click on Posts in the menu, then select Add New.
- 4 New Post Screen** — A new editor screen will open, ready for you to add your content.

WordPress Admin Sidebar — navigate to Posts > Add New

Post Editor — Content Modes

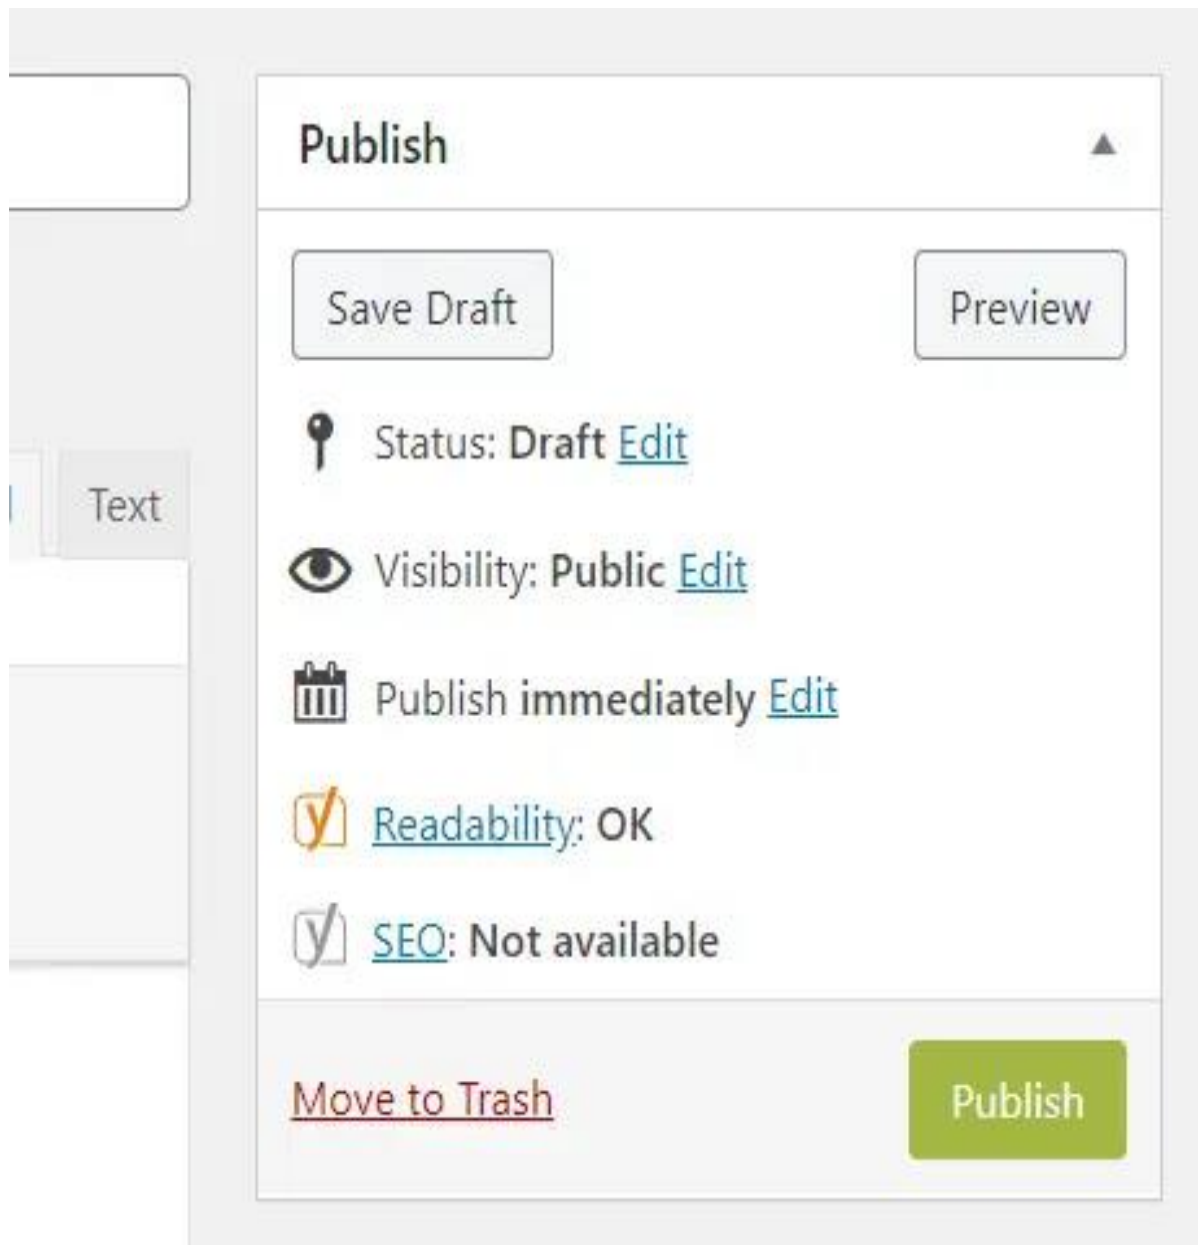

The Content area supports two writing modes:

Visual mode: Write in a regular WYSIWYG (What You See Is What You Get) format — ideal for most users.

Text mode: Write directly in HTML — useful for advanced users who want full markup control.

3. Publishing a New Post in WordPress

Once you have written your content and configured all formats and tags, you are ready to publish. Click the Publish button on the right-hand panel to make your post live.

Publish Panel Components

The Publish section contains the following controls:

Component	Description
Save Draft	Saves the post as a draft without publishing it publicly.
Preview	Opens a preview of the post so you can review it before going live.
Move to Trash	Deletes the post by moving it to the Trash.
Status	Changes the post status — Published, Pending Review, or Draft.
Visibility	Sets the audience — Public, Private, or Password Protected.
Published	Lets you schedule a specific date and time for the post to go live.

4. Edit Existing Post

To edit an existing post, navigate to Posts > All Posts from the Admin Sidebar. You will see a list of all the posts you have created.

Hover your mouse over any post in the list to reveal two editing options:

- Edit — opens the full post editor for comprehensive changes.
- Quick Edit — opens an inline editor for fast updates to the title, slug, date, status, and more.

5. Delete Existing Post

To delete an existing post, navigate to Posts > All Posts from the Admin Sidebar. You will see the complete list of all your posts.

Hover your mouse over any post to reveal the Trash link.

Clicking Trash moves the post to the Trash folder — it is not permanently deleted immediately.

You can restore trashed posts from Posts > Trash, or permanently delete them from there.
