6. Delete Existing Page

1. What Are Pages in WordPress?

Creating pages for your website is similar to creating Posts in WordPress. Pages are a collective set of static content that does not change its display information dynamically during the website run.

Pages are perfect for timeless, evergreen content — such as About Us, Contact, or Services.

Unlike posts, pages are not listed in chronological order and do not use tags.

Pages can be nested under parent pages to build a structured site hierarchy.

2. How to Add a New Page in WordPress?

Follow these steps to add a new page in WordPress — the process is very similar to adding a new post:

1 Log in — Sign in to your WordPress admin account.

2 Dashboard — You will see the WordPress Dashboard screen after logging in.

3 Admin Sidebar — Locate the Admin Sidebar Menu on the left side of the screen.

4 **Navigate to Pages** — Click Pages in the sidebar, then choose Add New.

5 **New Page Screen** — A new editor screen opens with fields to add your page content.

6 **Two Primary Components** — The editor screen has a Title field and a Content area.

Page Editor — Components

The new page editor screen consists of two primary components:

→ **Title:** An input field where you enter the title of your page.

→ **Content:** A textarea to write the page content — available in two modes:

- **Visual mode:** Write in a regular WYSIWYG format — ideal for most users.
- **Text mode:** Write directly in HTML format, similar to Windows Notepad.

3. What Is a WYSIWYG Editor?

WYSIWYG stands for "What You See Is What You Get." The WYSIWYG Editor has similar capabilities to a Word Processor and is the primary interface for drafting and formatting your page content.

Available Toolbar Buttons:

Bold	Italic	Word Strike	Bullet List	Number List	Block Quote
Left Align	Right Align	Justify	Add Link	Distraction-Free	Toggle Toolbar

The horizontal line button inserts a visual divider between sections of content.
Distraction-Free Writing mode hides all UI panels for a focused writing experience.
You can switch between Visual and Text modes at any time without losing content.

4. Publishing a New Page in WordPress

Once you have written your entire article or content, you can publish the page by clicking the Publish button located in the right-side panel of the editor screen.

WordPress Publish Panel — Save Draft, Preview, Status, Visibility, and Publish

Publish Panel Components

The Publish section provides the following controls:

Component	Description
Save Draft	Saves the page as a draft without making it publicly visible.
Preview	Opens a preview so you can review the page before it goes live.
Move to Trash	Moves the page to Trash — it is not permanently deleted immediately.
Status	Change between Published, Pending Review, and Draft status.

Visibility	Set the audience: Public, Private, or Password Protected.
Published	Schedule a specific date and time for the page to go live.

5. Edit Existing Page

To edit an existing page, navigate to Pages > All Pages from the Admin Sidebar. You will see a complete list of all pages created on your site.

Hover your mouse over any page in the list to reveal two editing options:

- Edit — opens the full page editor for comprehensive changes.
- Quick Edit — opens an inline editor for fast changes to title, slug, date, and status.

6. Delete Existing Page

To delete an existing page, navigate to Pages > All Pages from the Admin Sidebar. You will see the complete list of all your pages.

Hover your mouse over any page to reveal the Trash link.

Clicking Trash moves the page to the Trash folder — it is not permanently deleted right away.

You can restore trashed pages from Pages > Trash, or permanently delete them from there.
